

Abstract of the Disclosure

A form that incorporates either a label or card such that the form can be reliably printed on by the end user and manufactured less expensively. The integrated label form includes a top printable substrate and a liner substrate mated together by an adhesive. The top printable substrate serves at least partially as removable portions capable of being reapplied. Weakened lines of substrate may be provided to define removable portions on the top printable substrate. The form also may include a similar printable substrate mated to the other side of the liner by adhesive. Weakened lines of substrate also may be formed in the second substrate to define removable portions. The integrated card form includes a printable substrate and a first and second laminate mated to the substrate and together by an adhesive. Weakened lines of substrate and first laminate define an integrated removable portion capable of being held in the form by the second laminate and easily removed manually when desired. In the integrated card form and the integrated label form, a recess may be provided adjacent the removable portion to facilitate removal of the removable portion. The integrated forms are easily manufactured by a single piece of equipment.
